

How to Increase Tenant Satisfaction and Building-Owner Profits with Affordable Internet

Critical business applications, Netflix, mobile apps and live streaming - the demand for high-bandwidth internet is growing rapidly, and building owners and property managers must keep up. Most affordable internet options are unreliable, but fiber internet for every tenant is too expensive...or is it?

Property owner and manager Sam Peters at Peters Real Estate owns dozens of properties throughout the state of Mississippi. Tenants of the company's most popular mixed-used property were demanding better internet after continual issues with their cable provider. Sam knew that the best solution would be fiber internet, but supporting the cost for it wasn't an option.

Sam consulted with Fuse.Cloud to bring a reasonably-priced fiber circuit to the building, allowing all tenants access to the better internet. With Sam's help, Fuse.Cloud reached out to the tenants in the building to secure higher-bandwidth internet for the same price they were paying their cable providers. And the best part, Sam receives a residual commission on every tenant referral he makes to Fuse.Cloud.
